

Protocol for Dragon Fruit Using Masinag Organic

For newly planted

1. Mix Masinag 1:100 dilution with water
2. Water the plants 1 liter per plant once a month
3. Using a back pack sprayer or any sprayer, spray to the plants the solution 2 times a month. Make sure all surface of the plants are sprayed.

For Grown up 1 year and above

1. Mix Masinag 1: 50 dilution with water
2. Water the plants 2 liters per month.
3. Spray the solution using sprayer 2 times a month.

Note; Dragon fruit belongs to cactus family and no need to use plenty of water. It is very susceptible to fungus. It is best to put organic matter on the soil where it should be planted (30 bags of compost or chicken manure per hectare will do)
